[Chemicals](#)

CME's Industrial Commodity products (Weather, NYMEX e-miNY, Chemicals) offer a range of new risk management tools designed to serve markets and industries that have not traditionally had access to futures. Some of these products—weather, for example—are based on new definitions of tradeable commodities. Others, such as the petrochemical and e-miNY energy products, stem from innovative partnerships. All of these products demonstrate CME's commitment to recognizing market needs and developing products to meet them.

Real-time Quotes Now Available!

Get FREE real-time quotes for monthly weather futures and options on futures contracts through Wolverine Trading at [Real-Time Weather Futures and Options prices](#).

Products

CME® futures on livestock, dairy and forest products enable numerous companies, ranging from small family farms to large agribusinesses, to better manage their price risks. Trading commodities can also be rewarding for those who accept the risk these agribusinesses seek to diminish. Now, both hedgers and traders have a choice of contracts — electronic or pit-traded.
